

STARK

Hydraulic double action for quicker and safer mounting solutions

Extremely quick clamping and releasing for short cycle times

SPEEDY hydratec

Zero point mounting system

SPEEDY hydratec – impervious to dirt because of its central locking and the conical shape

SPEEDY hydratec - locks and releases hydraulically

With the **SPEEDY hydratec** STARK has developed a compact, hydraulic double action clamping element.

Due to the extremely short clamping cycles, the **SPEEDY hydratec** is well suited for automated applications with short cycle times.

- Extremely quick clamping and releasing
- Small, compact size makes tight gauges possible.
- Adjustable draw in force up to 20 kN
- Long service life
- Integrated mounting and clamping checks (optional)
- extremely compatible to shavings
- Compatible to the **SPEEDY** Sweeper product pallet

Optimal space utilization with two sizes

Two different sizes with the same draw in force of 20 kN permit optimal space utilization. Naturally, the **SPEEDY hydratec** is compatible with all common coupling systems. This enables a safe palletizing of hydraulically mounted workpiece s.

The central locking system and the conical shape make the **SPEEDY hydratec** impervious to dirt and well suited for full automatic processes.

Moreover, the **SPEEDY hydratec** is compatible to our SPEEDY Sweeper series. Depending on the application, palletizing can be unified.

SPEEDY hydratec - 20 kN draw in force at 140 bar

For assembly directly on the machine table
