

## Work Supports extending hydraulically - contact by spring force, single acting with spring return, max. operating pressure 500 bar

The plunger internal thread should always be plugged by a plastic cap or a screw-in extension to protect the element against penetration of liquids.

Sintered metal air filter  
Connection for ventilation hose ND 6  
by hose fitting **3300-921**.

Note:  
Connecting hole G 1/4 with counterbore  $\varnothing 19 \times 0,2^{+0,2}$  deep

### Description

With the 1910 range the support plunger is retracted in off-position. When pressurised the support plunger moves against the inserted workpiece by means of light force. With increasing oil pressure, the plunger locks hydraulically. After the system has been unclamped, the support plunger returns to off-position. The support plunger is provided with female thread to enable the use of threaded pieces for height adjustment. Oil supply can alternatively be effected from the side or from below. The internal part of the work support is protected against dust and swarf by a sintered metal air filter.

### Important notes!

If there is any danger of fluids being sucked into the filter, a vent hose has to be connected. Spring force should not be used to lift workpieces.

Contact bolts and extensions with large weight can influence the functions of this component.

Work supports are not suitable to compensate side loads.

Operating conditions, tolerances and other data see data sheet A 0.100.

It is absolutely necessary to follow the instructions for venting of the spring area on data sheet A 0.110.

### Admissible load F as a function of the operating pressure p

### Max. elastic deformations s as a function of support force F

Connections	on side	at the bottom
Plunger $\varnothing$	[mm] 40	40
